Frank Lam

Software Developer

SUMMARY

Software developer with 8 years of experience, including 5+ years at Carnegie Learning building K-12 education platforms used by 20,000+ teachers across 1,000+ schools. Builds products end to end, from Angular micro-frontends to Node.js and AWS Lambda services, and uses AI-assisted, spec-driven development to ship large features fast.

SKILLS

Languages
TypeScript, JavaScript (ES6+), HTML, CSS/SCSS

Frontend
Angular (standalone, signals), React, NgRx, RxJS, Module Federation, Tailwind CSS

Backend & Cloud
Node.js, Express, AWS Lambda, Firebase, MongoDB

Testing & Tools
Jest, Git, Jira, Figma

AI Development
Claude Code, Kiro, spec-driven development

EXPERIENCE

Software Developer

Carnegie Learning | Jan 2021 – Present

Promoted within first year (2021)

- **Led and single-handedly built the Class Management Tool**, an Angular micro-frontend (Module Federation) embedded in **3 Carnegie Learning applications**. **Thousands of teachers and administrators** use it to create classes, roster students and assign licensed content through license-aware course trees.
- **Built Supportal from the ground up**: the front end of the company's identity platform. A **50+ person support team** uses it to manage users, schools, districts and licenses for **1,000+ K-12 schools** using MATHia and Passport.
- **Helped deliver Analytics Hub from kickoff in June to launch in November 2026.** It's a reporting app with KPI dashboards for assignments, scores and activity at the district, school, class and student levels.
- **Helped the team adopt AI-assisted, spec-driven development** (Kiro, Claude). We kept feature documentation in sync with the code so AI could make large changes quickly and reliably, which was key to hitting the Analytics Hub deadline.
- **Developed backend services** with Node.js and AWS Lambda, and wrote data migration scripts for the core platform team.

Consultant – Web Developer

Capco (client: Huntington Bank) | Apr 2020 – Jan 2021

- **Helped build Huntington Bank's Business Online Account Opening (BAO) flow**, a multi-step application where business owners answer questions about their company to open an account online, in an Agile Scrum team.
- Built reusable Angular components in TypeScript and managed state across the flow with NgRx and RxJS.
- Raised unit test coverage **from 11% to 80%** with Jest, stabilizing releases.

Web Developer

Wholesale Tradelines | Mar 2019 – Feb 2020

- Built and ran the company's e-commerce site, which generated **$100,000+ in sales**, and connected the email marketing and sales tools (GetResponse, Pipedrive) used by a **10+ person sales team**.
- Cut customer support response time **from 3 days to 1** by rolling out Zendesk.

Web Developer

Freelance | Nov 2018 – Apr 2019

- Gathered requirements from clients, then designed and built custom websites.

Professional Photographer — *Multivista | Jul 2016 – Apr 2018*

PROJECTS

franklam.us Portfolio React · Claude · Vercel

- Redesigned my portfolio site with AI: generated a custom design system with Claude, then built it with AI-assisted coding and deployed it on Vercel.

Node.js API Node · Express · MongoDB

- Built an API that sends incoming requests on to Airtable, Twilio and SendGrid, and scrapes data from other sites with Puppeteer.

EDUCATION

University of Florida | *May 2015*
B.S. in Mechanical Engineering

College of Central Florida | *May 2012*
A.S. in Engineering
